Evidence Photomicrography

Our agency is the among the only private agencies in Colorado to offer this unique service. First introduced to the Larimer County County Coroner's Office in early 2008. What is Evidence Photomicrography? It is the observation, inspection, and high-resolution photographic and video documentation of evidence magnified up to 180x with resolution to less than 1.7 microns. There is also a limited range of integrated UV and IR light.

For civil and criminal litigation, we can inspect the evidence onsite and document details difficult or unseen by the human eye. These high resolution photographs can be further examined by a Subject Matter Expert, including ourselves as appropriate, for and to document evidence from toolmarks to bloodstains, from clothing to weapons and vehicles – because its completely mobile.

- Magnified examination and documentation of ink, paper toner, clothing fibers, hair, soil tracked shoes, fingerprints, blood stains., etc. for toolmarks and other unique characteristics.
- Firearms, sharp-edged instruments, make-shift weapons, etc. for toolmarks and other unique characteristics.
- Clothing and other materials for trace evidence, blood evidence, and specific characteristics of this evidence.
- All Computer Aided Macroscopic Photography assignments include: 1) Assignment Report and Photography / Video Log; 2) Original Files and Duplicate Files Renamed to the Assignment; and 3) Contact Sheet of All Photographs with Name, Date & Time Stamp.

We are available to fully document any size and location scene – indoors and outdoors, motor vehicle collision locations, involved motor vehicles, reported crime scenes, and evidence inspections.
